

The Value of Software as a Service (SaaS)

Freedom and focus

Today's government IT resources find themselves continually stretched to meet growing demands both internally and public-facing—for greater information access, consistent system performance, regulatory mandates and ever-evolving technology. PayIt's software-as-a-service deployment frees your limited IT resources to focus on other priority projects and lets our expert software providers develop and maintain your citizen engagement and payment processing mobile experience for you.

PayIt's cloud-based platform technology turns the old ideas of clunky transactional automation upside down. It simplifies citizen-government transactions with zero footprint, providing a modern user experience through both mobile and web applications.

Built to work intuitively with your existing systems, PayIt replaces paper-based process inefficiency with the unique combination of instant access and greater security. Effectively automating transaction processing and citizen engagement for your staff, while empowering people to manage their own personal profiles and business activities with ease.

With SaaS, the ability to operationalize all software- and IT-related expenses makes them measurable and

predictable—dramatically accelerating your return on investment. Our subscription fee model means you pay a single, annual fixed subscription fee for all services.

44% of IT managers say that overall cost reduction continues to be the primary reason their organizations adopted SaaS.

Measurable, predictable cost

With SaaS, the ability to operationalize all software- and IT-related expenses makes them measurable and predictable—dramatically accelerating your return on investment. Our subscription fee model means you pay a single, annual fixed subscription fee for all services.

Lower Costs. The PayIt solution delivers full mobile application functionality at significantly lower cost than the alternatives.

Predictable Costs. SaaS subscription costs are known in advance and can be properly accounted for in the budget process.

No Cost Overrun Risk. With known SaaS costs, there is no cost overrun risk as there would be with custom app development or customization of a COTS solution.

The Value of Software as a Service (SaaS)

Low-risk implementation

We implement the PayIt SaaS model in a phased and managed migration, beginning with initial customer-facing processes **within 90 days**, significantly reducing implementation risks.

No hardware or ongoing maintenance.

We handle the setup and all ongoing costs (hosting, maintenance and support) of the platform.

No obsolescence. The PayIt platform benefits from ongoing R&D and will always use the latest software and hardware technologies. This eliminates the need to consider fixing or replacing your PayIt system in the future due to obsolescence.

Future flexibility. Our platform is scalable and flexible, so as your needs and citizen demands grow and change, our platform will too, allowing for new features and services.

Unmatched security. Our technology uses industry-leading security and encryption features inherent to the Amazon government cloud—the same development cloud used by many Department of Defense (DoD) applications. It's highly secure with full disaster recovery with multi-site availability and fast recovery times.

If citizens find it difficult to interact with their government, it leads to higher levels of dissatisfaction. Mobile solutions like PayIt are already embraced by the private sector, so it's not a risky venture for governments.

Former Chair of Texas Transportation Commission

Our effort, your impact

Partnering with PayIt lets you transform the relationship between your state or local entity and citizens by delivering a consistent, intuitive and convenient mobile or web app experience for all types of government services. At the same time, your IT staff has the support of a scalable and modern back-end platform that is fully managed, highly secure, and always current with the most up-to-date technology. Learn more about the PayIt platform or schedule a personal demo at payitgov.com.

Move your legacy systems into the now

Another advantage of PayIt's cloud-based platform? We can help you transform your back-end, legacy applications from outdated to on-point by easily modernizing them within the PayIt platform. Avoid complex and costly internal upgrades by letting PayIt manage and maintain your complete transactional system front-to-back with our secure, scalable technology.
