

PayIt Tolls

A tolling platform built for authorities

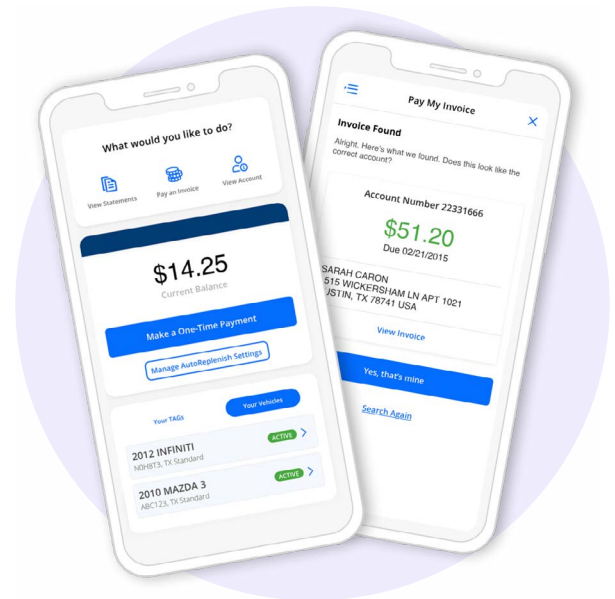

PayIt, a leading Software as a Service (SaaS) provider of digital government services and payments, is modernizing how constituents across the U.S. interact with tolling authorities. The PayIt platform is highly configurable and able to automate any tolling authority's workflows and payments, meeting all necessary business rules.

Accelerate your toll and turnpike revenue collection

PayIt will work with your authority to configure a platform that streamlines tag purchases, one-time toll payments and automatic transponder replenishment through our intuitive, always-on SaaS platform. Users can also securely store payment information and easily add to account balances.

- Coordinate payments across multiple vehicles
- Ability to have real-time toll-by-plate billing
- Look up transaction history and view statements
- Map out upcoming and previous travel routes and toll costs

Robust transaction and citizen engagement insights

Beyond payment collection and an improved constituent experience, PayIt also provides a robust admin portal that allows authorities to self-serve their data. We provide insights into general payment collection—like transaction volume and revenue—while also providing tolling-specific metrics like miles traveled and revenue by trip type.

- Unified back-end and visibility reporting
- Tolling hardware integration
- Fewer delinquent payments and faster time to revenue
